

Date of Treatment: \_\_\_\_\_ Address: \_\_\_\_\_

### **Spray Pest Treatment Instruction Sheet**

Please be advised that your unit will be treated for cockroaches using a spray treatment. This treatment will be completed by East West Pest control, a company that has been servicing the Charles Street Residence since November 2004. The pest control treatment will take place on the date noted above and will require some preparation on your behalf.

#### **Preparation Needed:**

The treatment will be performed throughout the entire apartment. Please be sure to do a thorough cleaning of the unit and be sure that any food remnants such as grease and crumbs are removed. Also, please ***pull the stove and fridge out from the wall and clean behind them.*** If the level of cleaning is insufficient, the treatment will **not** be done.

On the day your unit is scheduled for the treatment, you will need to have prepared the unit according to the instructions outlined on the back of this page. All kitchen cupboards and drawers **must** be emptied. Do not leave any dishes or items on the kitchen counters. The base of all closets and any shelves inside each closet needs to be cleared. Move all furniture away from the walls in order to leave the baseboard exposed in every room. The technician will be spraying the baseboards throughout the apartment. Finally, clear all items from the bathroom and medicine cabinet.

#### **On the Treatment Date**

Industry standards recommend that you vacate the apartment for ***4 hours*** after the treatment is completed. If you have sensitivities or other health concerns you may choose to extend the vacate period for several more hours. If you have any concerns about the treatment, please speak to your doctor

#### **Post-Treatment**

The chemical used is effective for 4 weeks. During this time, do **not** wash the baseboards or the inside of your kitchen cupboards. **It is imperative that all dead cockroaches are discarded immediately by sweeping them up, bagging them, and placing the bag down the garbage chute.** Dead cockroaches still have live egg sacs in them and each egg sac may produce up to 30 live babies. We recommend that you schedule a follow-up gel treatment after 4 weeks if you are having a continued problem.

Thank you for your co-operation,

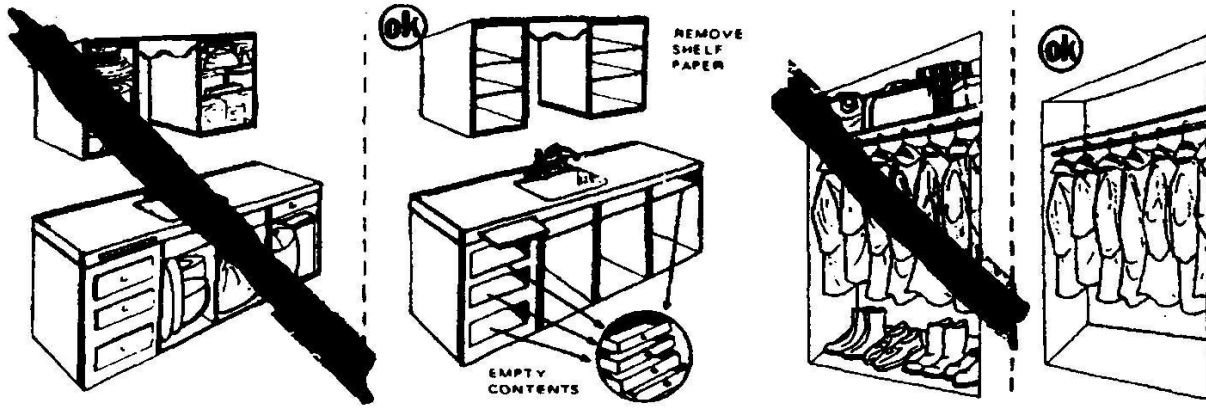

Residence Office.

East West Pest Control

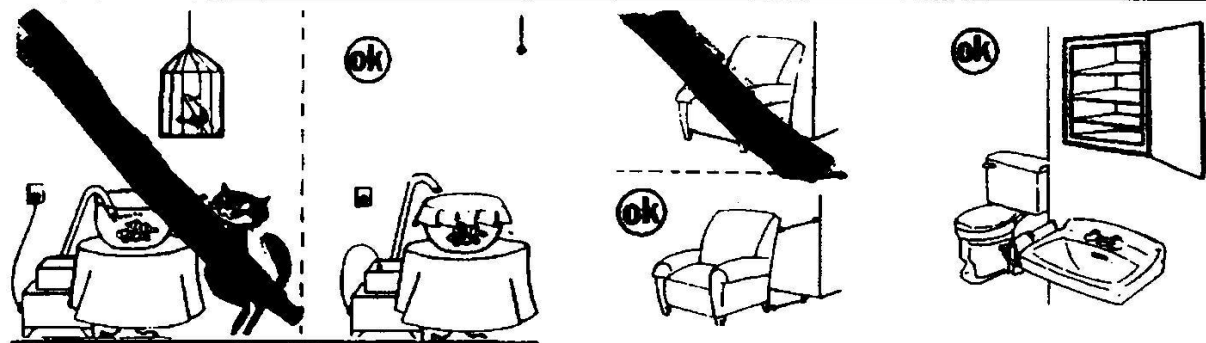

Our company has been engaged to perform Pest Control Services in your apartment, and it is essential that the following preparation be completed before work can proceed. It will also be necessary to leave the apartment for four hours after our serviceman arrives.

ON .....

Clear your kitchen cupboards top and bottom of all dishes and foodstuffs. Remove old shelf paper. Empty and remove kitchen drawers of knives and forks etc. Do not place dishes on kitchen counter.

Clear all closet floors of shoes, etc. It is not necessary to remove clothes on hangers.

Remove All Pets

Cover Fish Tanks.  
Disconnect Filters.

Move furniture away from walls.

Clear all items from bathroom cupboard and vanity.

**Note:**

- Chemical used is effective for a period of 4 weeks.
- Do NOT wash shelves or baseboards for at least 4 weeks after service.
- Put shelf paper on all shelves before replacing contents.
- Any infestation noted after the 4 week period is to be reported to the Residence Office immediately.
